

BizWatch

Real-time Business Analysis Dashboards for Unprecedented Enterprise Visibility and Proactive Management

View your entire environment by business process, in **REAL** time

Make informed decisions at the speed of business with real-time KPI data

Respond to issues before they impact vital services and business

Receive automatic alerts so the right people are immediately aware of potential problems

Track and analyze business trends over time

Prioritize problem resolution by knowing which users are affected

In business, what you don't know can hurt you. BizWatch gives you the tools to proactively manage at the speed of business and react quickly to changing business conditions. Its business analysis monitoring (BAM) and actionable alerts give you an edge in the real-time business environment.

With customized dashboards, BizWatch displays enterprise-wide data for key performance indicators (KPI) on a single interface. Its real-time updates give you unprecedented, real-time visibility into all your operations.

Reinventing the way you monitor your business

It can be nearly impossible to identify initial problem signs or critical long-term business trends in stacks of monthly reports from multiple sources. BizWatch is different. It consolidates data on applications, systems, and networks into a simple, at-a-glance display. Its panel displays instantly show you what is impacted by a problem. And BizWatch notifies key decision makers of any changes or exceptions *as they happen*, not weeks later.

Optimized data presentation

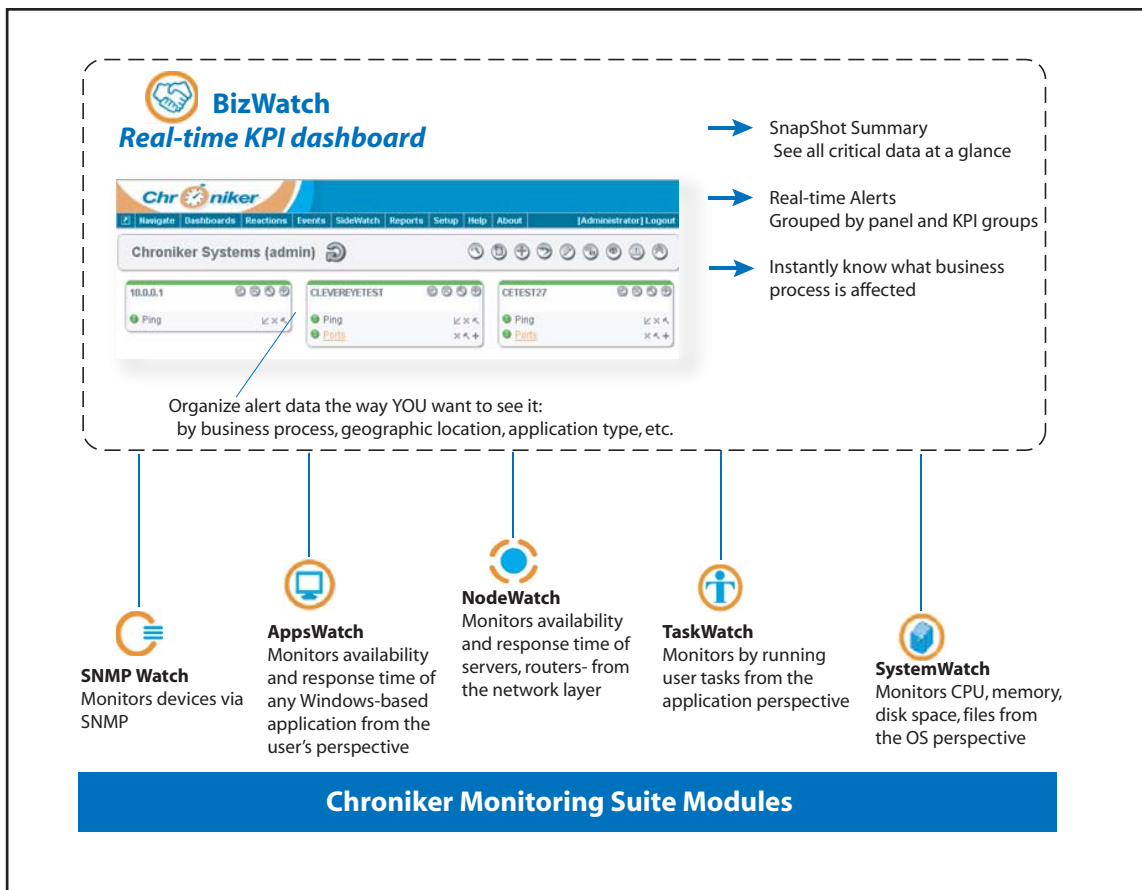

True business intelligence involves more than just KPI data. It is essential that the data is displayed so users can best understand and use the information. With its flexible user interface, BizWatch allows you to group and show data in any way that makes sense to you.

BizWatch lets you display data how you want it- whether that's grouped by geographic location, application type, server type, business process, or anything else

Users can even change or create new metrics or KPI groups to be monitored *on the fly*. It's as simple as a few mouse clicks and doesn't require any scripting or IT assistance. Updates to the dashboard take seconds, not weeks. As corporate strategies and plans change, BizWatch gives your entire team the flexibility and agility to quickly react.

Personalized dashboards let you focus on what's important

With BizWatch, each level of the organization can create their own personalized dashboards that focus on the KPIs and data that reflect their specific targets and objectives. In fact, each user can configure several dashboard profiles and toggle between them.

BizWatch processes and consolidates enterprise-wide data for all the Chroniker modules. It extends their functionality by adding more administrative functions and flexible grouping and alerting configuration. By keeping track of data for all applications and locations, BizWatch ensures that you always stay on top of all critical business factors.

Automatic, Real-time Alerts

With BizWatch's advanced trigger and alerting capability, you can be sure that potential problems are immediately identified and escalated to appropriate personnel. You can even be notified of changes to any key business metrics, allowing you to take immediate action to changing business conditions or new opportunities.

Alerts can be defined by each user and sent in several ways (email, pager, dashboard alerts) to make sure the right people receive the information in time to act.

At-a-glance Status Checks

SideWatch provides a snapshot view of the status of your business service. Throughout the day, you can monitor the activity and status of applications, systems, and networks. The SideWatch panel provides a full status overview of your applications, systems, and networks

Drill-down Functions for Fault Diagnosis

BizWatch offers powerful drill down capabilities. Within seconds, you can access critical data on the problem for faster fault diagnosis and mean time to repair. By easily drilling down to various levels of granularity, operations staff can analyze root cause problems, check details for SLAs (Service Level Agreements), and study business exceptions.

BizWatch is part of the Chroniker Availability Monitoring Suite. All modules monitor from a different perspective:

-  NodeWatch
-  TaskWatch
-  SystemWatch
-  SNMPWatch
-  AppsWatch
-  LogWatch
